POLL

precursor.ca/slides

Does your organization, or do your clients have a software update policy that must be enforced?

precursor.ca/slides

**Do you apply reminders to your organizations
or to your clients devices?**

precursor.ca/slides

Does your organization, or do your clients have an HR department that enforces behaviour or is this left up to you?

precursor.ca/slides

35 micro clients (3-25 employees)

Most lack stated policies

No HR department to enforce behaviour

precursor.ca/slides

Do I want to write policies and configure Nudge for 35 client organizations?

Do I want to be the one to enforce policy?

Logout Reminder

With the weekend coming up we just wanted to remind you of the best way to keep your computer working at peak efficiency.

The Precursor Managed Software Center will keep all your Apple and Third Party software up-to-date.

Just log out of your computer (but leave it turned on) before going home for the weekend.

Note: If you take your laptop home for the weekend just leave it plugged in, screen open, and logged out for at least two hours - that should be enough time for updates to run.

Thank you for your co-operation and have a great weekend!

Anti-Patterns

precursor.ca/slides

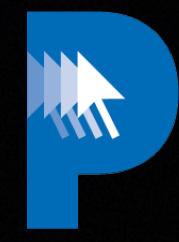

The anti-pattern is a commonly-used process, structure or pattern of action that, despite initially appearing to be an appropriate and effective response to a problem, has more bad consequences than good ones.

The screenshot shows a web browser window with a dark header bar containing navigation links for 'Mac', 'iPad', 'Music', and 'Support'. The main content area features a large red Apple logo on the left, with the text 'AppleCare Protection Plan' below it. The central text reads: 'Your system is infected with (3) Viruses and (1) Phishing/Spyware. System damage is being done. Traces of (2) malware and (1) Phishing/Spyware were found on your Mac OS X. Personal and banking information are at risk.' A prominent blue button at the bottom contains the text 'Please Call Apple Support : +1-800-575-9227'. A white warning dialog box is overlaid in the center, with the title 'WARNING!' and a close button. The dialog box contains the text: 'Press Esc to exit full screen. MAC OS is infected with Viruses and other malicious applications. Viruses must be removed and system damage repaired. It is necessary to Call Apple Support +1-800-575-9227 and follow Virus removal procedure immediately. **If you leave this site your Mac OS will remain damaged and vulnerable**'. At the bottom of the dialog box, there is a checkbox labeled 'Prevent this page from creating additional dialogues.' which is checked.
