

4'th ANNIVERSARY SPECIAL!!

Precursor is celebrating four years in business by renewing and rededicating our efforts to provide the best support for digital publishing, imaging, audio and video.

We would like to thank our customers, whose loyalty has made this success possible.

Precursor Updates Phone System 793-1880

If you've called us recently you know that we have a new phone number: (204) 793-1880. Why the change? Precursor Systems is taking advantage of new Digital PCS technology. Some improvements that you may notice include a drastic reduction in the number of electronic voices you will here at reception. In fact, most calls go straight through to head honcho, Alex Narvey without interruption! Furthermore, messages no longer get lost in "Prime Line limbo" – our Sony Digital PCS phone is now instantly notified of incoming messages even when we are already on the line (eliminating what has sometimes been a delay of several hours getting your "urgent" messages to us).

Adaptec Toast 3.5.4

The latest version of the Toast CD recording software offers compatibility with more CDR and CDRW devices, improved performance, and now allows you to cut bootable CDs.

CDR Firmware Updates

This month sees some updated firmware for CDR and CDRW drives. LaCie is offering the Matsushita/Panasonic 7502 updater and Yamaha offers the updater for its CDR400 and CDRW4260 drive direct. The newer firmware offers bug fixes and G3 compatibility and should be used in combination with the new version of Toast described above.
