## Microsoft PowerPoint/Excel Security Update

Microsoft has updates for both Office 98 and Office 2001 that addresses a vulnerability that could allow malicious code to run in a Microsoft Excel for Mac or Microsoft PowerPoint for Mac file without warning. This could cause damage to data or allow unauthorized retrieval of data from your system when you visit a Web site or open an e-mail message. After you apply this update, a warning will appear when you open an Excel or PowerPoint file that contains macros.
